ABSTRACT

A method and system are provided for updating call-specific data in a database associated with operation of a wireless network. The method includes receiving user input related to a Lucent ECP form, and one or more fields of the form, for which changes are desired. The method also includes generating a script to update the form by identifying one or more values associated with call-specific data in the wireless network. The method also includes creating an apxrcv script based on the user input and the values associated with the call-specific data. Finally, the method involves executing the apxrcv script to update the form. This method can also be implemented in a system or on a computer-readable medium.
